

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	30 September 2023
Team ID	NM2023TMID06078
Project Name	Quantitative Analysis of Candidate in 2019 Lok Sabha Elections
Maximum Marks	4 Marks

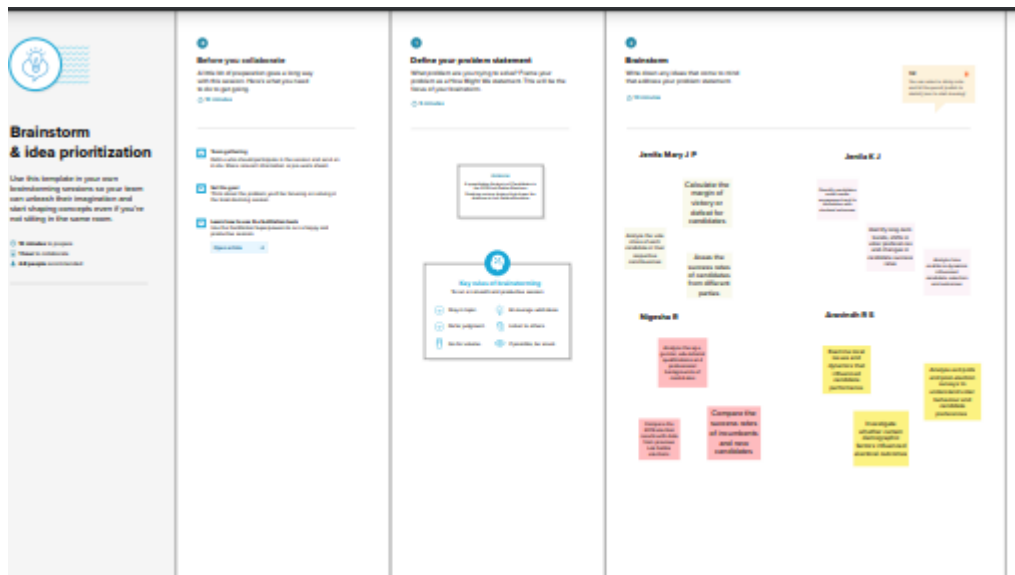

Brainstorm & Idea Prioritization Template:

Creating a brainstorming and idea prioritization template for quantitative analysis of a candidate in the 2019 Lok Sabha Elections involves breaking down the process into various components and evaluating them. Here's a template you can use:

Brainstorm: Identify potential sources of quantitative data such as electoral commission reports, campaign finance records, opinion polls, and social media analytics.

Prioritize: Prioritize data sources based on accessibility, reliability, and relevance to the campaign.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Group ideas

Take turns sharing your notes, either clustering similar or related notes as you go, then all voting notes have been generated, give each student a sticky note to label it a candidate or bigger than other sticky notes, try and use it if you can't break it up into smaller sub-groups

1. **Group ideas**

Take turns sharing your notes, either clustering similar or related notes as you go, then all voting notes have been generated, give each student a sticky note to label it a candidate or bigger than other sticky notes, try and use it if you can't break it up into smaller sub-groups

Prioritize

You learn about others on the same page about what's important, moving forward. Place your ideas on the grid to determine which ideas are important and which are feasible.

After you collaborate

You can capture the results as an image or print it out and give students a chance to change or add to their ideas or delete a topic.

1. **After you collaborate**

You can capture the results as an image or print it out and give students a chance to change or add to their ideas or delete a topic.

Some terms relating your shares within clusters are not selected items as you are likely to already have these terms. You can search for a term within a cluster to see if it is already there. If it is, it will be marked as such. If it is not, it will be marked as such. If it is not, it will be marked as such.

Analyze historical voting patterns to calculate the swing in votes for each candidate and party compared to previous elections

Analyze the results to identify trends in candidate popularity, party performance and regional variations

Two more should all be on the same page about others' important moving forward. Place your class on the grid to determine which class are important and which are feasible.

15-20 minutes

This category of trust is an image as well as a share with members of your company who represent a target.

Group meeting forward
